Appendix B

Readme File – Dashboard

Introduction:

The Hajj and Umrah Analytics dashboard was developed using Power BI to provide a comprehensive overview of pilgrimage operations, traveler insights, and performance indicators related to Hajj and Umrah activities.

The dashboard offers an interactive and visual experience that helps users monitor key metrics such as pilgrim distribution, service performance, travel trends, operational efficiency, and regional insights. It is designed to support data-driven decision-making for stakeholders, administrators, and analysts involved in pilgrimage management.

Installation:

- Ensure that Power BI Desktop is installed on your computer. (It can be downloaded for free from the official Power BI website.)
- Download the dashboard file (.pbix) from the provided link or email.
- Open the file using Power BI Desktop to explore and interact with the data.

Usage:

Filters / Slicers

Users can filter and analyze the dashboard using interactive slicers such as:

- Year / Period
- Region / Country
- Pilgrim Type
- Service Category
- Transportation or Accommodation Metrics
- Operational Status and Performance Indicators

These filters allow users to focus on specific operational areas and generate targeted insights.

Visualizations

The dashboard includes multiple visual models such as:

- **KPI Cards:** Overview of total pilgrims, operational counts, and performance summaries.
- **Bar and Column Charts:** Comparative analysis of pilgrimage activities across regions, services, and periods.
- **Pie and Donut Charts:** Distribution analysis for categories such as pilgrim types, services, or operational statuses.

- **Line Charts:** Trend analysis over time to monitor growth, demand, and seasonal patterns.
- **Map Visuals:** Geographic distribution of pilgrims and related activities.
- **Tables and Matrices:** Detailed operational breakdowns and supporting data views.

Interactivity

All visuals are dynamic and interconnected. Selecting an element in one chart automatically filters related visuals, enabling users to explore patterns and relationships more effectively.

Troubleshooting:

Missing Visuals

- Ensure all data sources are correctly connected and loaded.
- Refresh the dataset in Power BI Desktop if visuals do not appear properly.

Performance Issues

- Close unnecessary applications while running Power BI Desktop.
- Ensure your device meets the recommended system requirements for Power BI.

Data Refresh

- If the dashboard is connected to external data sources, refresh the data periodically to ensure accuracy.
- For static datasets, manual refresh is only required when the underlying data changes.

Compatibility

- Use the latest version of Power BI Desktop to avoid compatibility issues with visuals or features.

Support

For technical issues, updates, or questions regarding the dashboard, please contact the project team or dashboard administrator.

Conclusion:

The Hajj and Umrah Analytics dashboard is designed to provide valuable operational and analytical insights through intuitive visualizations and interactive reporting features.

By enabling users to monitor trends, evaluate service performance, and analyze pilgrimage-related data efficiently, the dashboard supports informed decision-making and improved operational planning.

Feedback and suggestions for improving the dashboard are always welcome.
